

HIGH PRESSURE LINE FILTERS

- The highly compact Pressure Line Filter is ideal for applications in simple hydraulic systems.
- It is tested up to 700 bar.
- The body and cover are made of ED coated mild steel.
- The filtration elements are available in 10, 25 & 75 microns ratings respectively.
- It provides reliable protection to dirt sensitive components. Due to the use of a sintered bronze filter cartridge, it provides absolute filtration.
- To prevent any contamination gaining entry into the system, no by-pass valve is provided.
- “O” Ring port ensures leak protection.

Also, we make filters as per customer specifications.

Model No	Capacity (LPM)	Pressure Bar	A	B	C	D	E
HPLF - 10 - 05	10	700	78	50	82	27	1/4" BSPT

Warning *The filter elements are likely to clog faster, because of absolute filtration and the absence of a by-pass valve. Therefore, the use of higher micron (75) filtering elements are recommended, especially where a very high degree of system cleanliness is not maintained.*
