

■ Pressure Reducing Valves

Pressure reducing valves are used to set the pressure of a hydraulic circuit below that of the main circuit. Operation under remote control is also possible by using the remote control port.

RG-10	HGM-10-2080	1-1/4 BSP.F	4.8
	HGM-10X-2080	1-1/2 BSP.F	5.7

- Sub-plates are available. Specify sub-plate model number from the table above. When sub-plates are not used, the mounting surface should have a good machined finish.
- The sub-plates are the same as those for HC type pressure control valves. With the reducing and check valve, the sub-plate is used in position 180° turned (upside down) from the normal position. When mounting the sub-plate, be sure to bring the valve locating pin to the sub-plate pin hole. For HGM 06/06X/10/10X dimensions, see page 287 & 294 in EIC-C-1003.

Instructions

- To adjust the pressure, loosen the lock nut and turn the pressure adjustment handle slowly clockwise for higher pressures and anti-clockwise for lower pressures. After adjustments, do not forget to tighten the lock nut.
- Connect the drain port directly to the tank in which case the pressure at the drain port should be kept at a low back pressure close to the atmospheric pressure.
- In case of “Threaded Connections”, there are two threaded connections type primary pressure ports. They can be connected each other in-line; one as an inlet and the other as an outlet or the valve can be used by plugging one of the pressure ports.

Pressure Reducing and Check Valves

Pressure reducing and check valves are used to set the pressure of a hydraulic circuit below that of the main circuit. They have check valves, which allow a free flow from the secondary side to the primary. Operating under remote control is also possible by using the remote control port.

Pressure Drop For Reversed Free Flow

Hydraulic Fluid : Viscosity 35 mm²/s , specify Gravity 0.850

RCT-03

RCG-03

RCT-06

RCG-06

RCT-10

RCG-10

- For any other viscosity, multiply the factors in the table below.

Viscosity cSt	15	20	30	40	50	60	70	80	90	100
Factor	0.81	0.87	0.96	1.03	1.09	1.14	1.19	1.23	1.27	1.30

- For any other specific gravity (G), the pressure drop ($\Delta P'$) may be obtained from the formula below.
 $\Delta P' = \Delta P (G'/0.850)$

Flow Rate vs. Secondary Pressure
